

**Postdoctoral Fellowships and Research Staff Positions available in
Global Mental Health and Social Epidemiology: Macau (SAR), China**

The Global and Community Mental Health Research Group at the University of Macau (<http://www.um-gmh.com>) is a premier interdisciplinary research group comprised of physicians, epidemiologists, social workers, public health professionals and psychologists. Our grant funded research program is focused on 1) addressing disparities in health and healthcare access among communities facing adversity through participatory research, 2) understanding the social production of health and patterning of psychiatric conditions on a population level, and 3) evaluating interventions to reduce mental health problems and poor health among populations who do not have access to needed services globally. Our team and our approaches are truly interdisciplinary in nature, and multiple perspectives on solutions to community health challenges are welcome. Our research agenda is focused on communities in Macau, Mainland China, and Southeast Asia.

We are seeking applications for postdoctoral fellows and research staff positions, to begin in the fall of 2015. Successful applicants would be able to assist in the management and execution of two grant funded mixed methods research studies. The first involves a culturally informed social and psychiatric epidemiological study in Macau. This population level longitudinal research will involve a series of qualitative studies and instrument validation studies, leading to quantitative population-level data collection. The second is a longitudinal mixed methods study of migrant communities living in Macau and Hong Kong. This research will involve a series of qualitative studies and instrument validation studies leading to quantitative population-level data collection. The aim of this research program also includes intervention development and evaluation. The fellows and research staff will assist the PI in study management, statistical analyses, report writing, and journal publication (as lead author or co-author as appropriate). The postdoctoral fellow is expected to take a more active leadership role within the research group and assist in the mentoring, training and development of PhD students and undergraduates. Engagement in grant writing activities is also expected.

Qualifications for both positions:

1. Advanced training and skills in qualitative and quantitative methods, including the use of statistical and qualitative software, 2. willingness to relocate to Macau (SAR), China, 3. experience with project leadership in global health or specific research experience in China or Southeast Asia, 4., track record of academic accomplishment (e.g., journal publications) or strong scholarship potential, 5., working knowledge of written and spoken Chinese (Cantonese and Mandarin), and/or languages spoken by Southeast Asian Migrants (Tagalog, Indonesian, Vietnamese, Thai) would be a distinct advantage.

For Research Staff position: Masters level qualification in public health, epidemiology, biostatistics, anthropology, sociology, medicine, global mental health/global health, or clinical psychology.

For the Postdoctoral Fellow: PhD, or professional equivalent (MD), in public health, epidemiology, biostatistics, anthropology, sociology, medicine, global mental health/global health, or clinical psychology.

The positions are located in Macau (SAR), China at the University of Macau (www.umac.mo) (ranked #39th in new universities under 50 years old). We are located in Southern China in a beautiful brand new campus located in Hengqin Island. We are one hour away from Hong Kong, and two hours away from Guangzhou, China. Housing for research staff and postdoctoral fellows may be available on campus.

To apply or for inquires, please send email directly to Dr. Brian J. Hall (brianhall@umac.mo). Applicants should include: Cover letter, curriculum vitae, representative publication reprints/preprints; Subject line: Postdoctoral position or Research staff position. Applications will be accepted until positions are filled.
